

DigiMSK — File Inventory

Short map of where the main pieces live. You do not need to open every folder.

TWO MAIN PIECES

- Study website (prototypes/digimsk_study_app/) — Login, chat, three display arms, feedback, research logging. Talks only to the bot; does not call the AI model itself. - Clinical bot (bot/) — Checklist, questions, local evidence, recommendation draft, safety. Vertex (or a local wording model) is used here for phrasing only.

INSIDE THE BOT

- Checklist intake — Turn each message into structured facts, then credit answers to the last question asked. - Question mode — Pick the next missing topic; ask one follow-up. - Disposition mode — Search local evidence (document library + red-flag graph), draft advice, run safety. - Wording model — Vertex Gemini via bot settings (vertex or local backend).

WHAT THE STUDY RECORDS AND SHOWS

- Arms — Same bot reply; Arm 1 short text, Arm 2 explanation, Arm 3 graph panel. - Sessions — Study logs in prototypes/sessions/; bot copies under bot/data/sessions/. - Not on the live path — Graphs/ explorer tools; Uncanny Valley/ offline prompt work.

SETTINGS AND PORTS

- Wording backend — DIGIMSK_GENERATOR_BACKEND = vertex or local - Vertex project — DIGIMSK_VERTEX_PROJECT_ID (and location); local model folder only if local - Study app bot — usually http://127.0.0.1:8001 - Ports — chat 3000, study app 8000, clinical bot 8001

Diagrams: diagrams/02_langgraph_pipeline.mmd (conversation modes),
diagrams/03_api_map.mmd (local vs AI model).
